

MY SITUATION AND NEEDS

My name is Mario, I am 19 years old and was born with dysmelia in my right hand. I've been a test subject at macu4 since the very beginning. The company was looking for people who wanted to test their products - in a completely different form back then - in detail. Over the years, many things have developed further, and today I mainly use the Ball Module and the Bike Module.

HOW I NOW EXPERIENCE ACTIVITY DIFFERENTLY

It used to be impossible for me to serve tennis consistently as I always had to serve the ball with my racket and hit it into the court by chance. This affected my entire game and made tournaments or matches impossible. But since I started using the Ball Module, I've finally been able to serve normally. This has finally allowed me to play matches - with real chances of winning!

The Explorer System has also made things a lot easier when cycling. It allows me to stay mobile and enjoy cycling without any problems.

MY EXPERIENCE AFTER 2 YEARS OF USE

My everyday life has changed noticeably. Thanks to the Ball Module, I can finally serve properly, which has increased my game and my motivation for the sport enormously. Matches that used to be impossible are now possible. The Bike Module also makes cycling easier for me and ensures that I remain mobile and independent. Overall, I have realised how much the right aids can improve my self-confidence.

CASE STUDY | PROSTHESIS

Product

Explorer System

Background

Dysmelia

Activities

Tennis, Cycling

Benefits

Improved tennis serve
Mobility

«Thanks to the Ball Module, I can finally serve properly – it has not only changed my game, but also boosted my motivation for tennis..»
